## Summary

Motivated Software Engineer and entrepreneurial leader with a proven track record in technical innovation, project execution, and team management. Seeking a role that leverages my dual expertise from developing scalable software and AI solutions to leading complex projects and teams.

## Experience

### Freelance Full-Stack Developer

St. George, UT - 07/2025 to Present

- Launched and delivered 3 products across 3 distinct markets.
- Developed project plans detailing scope, resources, and timelines to align team efforts and ensure project completion.
- Developed and implemented AI models for data analysis and prediction to enhance decision making processes.
- Designed software architecture for scalable applications in a fast paced environment.
- Developed user friendly applications using modern programming languages and frameworks.

### Big Bens Moving/ Shift Lead

St. George, UT - 05/2025 to Present

- Trained new team members on moving techniques and equipment operation to enhance team capability.
- Led moving crew, ensuring efficient workflow and adherence to safety standards
- Addressed customer concerns and provided timely updates to improve satisfaction.

### Innovation Labs at Utah Tech University - Web Developer

St. George, UT - 12/2023 to 07/2025

- Built and maintained sites with a web team using multiple programming languages to enhance functionality.
- Collaborated with developers to update websites and implement new features, improving user experience.
- Increase productivity by using software to find and fix problems.
- Ensured user satisfaction and retention through responsive tech support.
